

Crowder Awarded Western Wake Regional Water Reclamation Facility

Apex, NC (8/1/2011) - Crowder Construction Company was recently awarded the new \$75 million Western Wake Regional Water Reclamation Facility in New Hill, NC.

The 18 MGD facility will provide additional wastewater treatment capacity for new or expanding businesses in the Research Triangle Park, Apex, Cary and Morrisville. This facility allows more reclaimed water to be returned to the Cape Fear River. Once operational, the facility will help the local authorities meet compliance with new state mandates that require Apex, Cary, Morrisville and the Wake County portion of the Research Triangle Park to return reclaimed water to the Cape Fear River basin by 2011.

Crowder will be responsible for the preliminary treatment for the facility including biological reactor basins, clarifiers, disc filters, UV disinfection and post aeration. In addition, the site will include electrical buildings, chemical/plan water building, odor control facility and equipment storage building.
