New Surface WTP for Pender County, NC

Apex, NC (11/29/2010) Crowder Construction Company is building a new Surface Water Treatment Plant for Pender County, North Carolina. Construction of a 2 MGD plant, which will be expandable to 6 MGD, will satisfy the county's need for additional water supply.

The new water treatment plant will significantly increase the county's water supply, which currently uses water wells. The plant will serve the water needs of the current population and can be expanded to accommodate future population growth.

The water treatment plant is the first development in an area of Pender County that has been targeted for growth. With the plant in place, the county hopes to attract people and businesses to this area.
